PROFESSIONAL SUMMARY

AI/ML Engineer and Python Developer with hands-on experience building production-ready artificial intelligence systems, agentic pipelines, and scalable back-end integrations. Proficient in LangChain, LangGraph, OpenAI API, Retrieval-Augmented Generation (RAG), large language models (LLMs), natural language processing (NLP), prompt engineering, REST APIs, PostgreSQL, and full-stack development. Currently pursuing B.Tech. in Artificial Intelligence and Machine Learning at BIT Mesra.

SKILLS

Programming Languages: Python, C

AI / Machine Learning: Machine Learning, LangChain, LangGraph, Retrieval-Augmented Generation (RAG), OpenAI API, Prompt Engineering, Vector Embeddings, Natural Language Processing (NLP), Large Language Models (LLMs)

Back-End Development: REST APIs, Next.js, GitHub Actions (YAML), CI/CD Pipelines, Web Development

Databases: PostgreSQL, MySQL, Supabase, Vector Databases, SQL

Software Engineering: Object-Oriented Programming (OOP), Modular Architecture, Clean Code, Agile Development

Tools: Git, GitHub, OpenAI SDK, Python SDK, Jupyter Notebooks, VS Code

WORK EXPERIENCE

AI/ML Developer

2024 - Present

Independent Project Developer | Remote

- Designed a stateful AI agent using LangGraph to automate document ingestion, parsing, and context-aware retrieval from large PDF files via a multi-node Retrieval-Augmented Generation (RAG) pipeline.
- Architected vector storage using Supabase (PostgreSQL) with OpenAI embeddings, achieving real-time streaming responses and persistent multi-turn conversation state management.
- Delivered a full-stack application integrating a Next.js front-end with a Python back-end via REST APIs, applying OOP principles and modular architecture for production-grade maintainability.
- Developed a Python-based GitHub Action using the OpenAI API to automate pull request summaries, AI-driven code reviews, and release notes, reducing manual review overhead across the development lifecycle.
- Applied prompt engineering strategies and implemented a Quiet Mode feature to suppress low-value CI/CD notifications; maintained data privacy compliance through direct API routing.

PROJECTS

Agentic PDF Analysis System

Python | LangChain | LangGraph | Supabase | PostgreSQL | OpenAI API | Next.js

- Multi-node Retrieval Graph with dynamic query routing to vector database or direct LLM response; real-time streaming and persistent multi-turn conversation context using OOP design patterns.
- RAG pipeline with OpenAI embeddings and Supabase vector storage; full-stack delivery via Next.js front-end and Python REST API back-end with clean separation of concerns.

AI-Powered GitHub Code Reviewer

Python | OpenAI API | GitHub Actions | REST APIs | Git | CI/CD

- Automated pull request review GitHub Action using the OpenAI API; interactive feedback loop responds to developer comments within PR threads with Quiet Mode to reduce CI/CD noise.
- Strict data governance via direct OpenAI API calls; optimised prompts for concise, high-utility code review feedback across the software development lifecycle.

EDUCATION

Bachelor of Technology (B.Tech.) in Artificial Intelligence and Machine Learning

2023 - Present

BIT Mesra, Ranchi, Jharkhand, India

Senior Secondary Certificate (Class XII)

2022

St. Thomas Sr. Sec. School, Jaipur, Rajasthan, India
